Multi-Gig Positioning Visual Guide

- **Type Treatments**
- Type Treatments (Usage)
- Color Palette
- Texture
- Photography

These guidelines are intended for everyone who has a role in creating Sparklight Multi-Gig brand experiences. As brand stewards, we share a responsibility to cultivate and strengthen the Sparklight brand at every touch point, so it's essential that we unite behind a single set of principles, rules, and elements.

2GIG INTERNET

This type treatment is the flagship graphic of our multi-gig product. It is designed to convey a sense of energy, and uses dynamic slashes to promote our cutting edge Internet speeds. This graphic is to be used as a headline element for any / all multi-gig executions as a way of putting speed first in all of our customer communications.

Type Treatments - Various Speeds

Each treatment is aligned with a specific speed that will vary by market and by tactic. Treatments for speeds of 1.5 Gig, 2 Gig, 3 Gig and 6 Gig have been developed, but other speeds may be required for future use. Application of this type treatment should follow the visual language established in this set of graphics and should not deviate from the formula.

Type Treatments - Color usage

Tactics for rolling out multi-gig products generally occur in stages and guide the audience from when services are “Coming Soon” through to “Available Now.” Color is used to create visual separation between stages of the roll out with the **Sparklight Bright Blue** signifying that multi-gig is coming soon, and **Sparklight Bright Purple** indicating that it’s available now.

Type Treatments - Dominance and Visual Weight

Special consideration must be given to the placement and hierarchy of the type treatment in relation to the Sparklight logo. Preservation of the core elements of the brand should be of primary concern when building multi-gig compositions. The multi-gig type treatment should always be secondary to the logo in size, placement and overall visual weight.

Color Palette

Sparklight gray
PMS Cool Gray 11 C / 433 U
RGB 76/84/88
CMYK 12/0/3/80
HEX #4C5458

Sparklight red
PMS 2034 C / 2035 U
RGB 239/78/62
CMYK 0/85/80/0
HEX #EF4E3E

Sparklight yellow
PMS 1225 C / 115 U
RGB 255/206/81
CMYK 0/19/79/0
HEX #FFCE51

Sparklight bright blue
PMS 306 C / 312 U
RGB 0/184/216
CMYK 78/0/13/0
HEX #00B8D8

Sparklight bright purple
PMS 7656 C / 248 U
RGB 141/59/144
CMYK 48/90/0/4
HEX #8D3B90

Sparklight bright green
PMS 376 C / 382 U
RGB 132/195/65
CMYK 53/0/100/0
HEX #84C341

Sparklight blue
PMS 2728 C / 293 U
RGB 0/96/174
CMYK 100/65/0/0
HEX #0060AE

Sparklight purple
PMS 2105 C / 2098 U
RGB 53/48/145
CMYK 97/100/0/0
HEX #353091

Sparklight green
PMS 2272 C / 2272 U
RGB 43/169/72
CMYK 78/3/100/2
HEX #2BA948

Multi-gig materials should adhere to the set of brand colors outlined in Sparklight's core visual identity guide. However, there are a few distinctions and special considerations outlined below.

Color Palette - Special Considerations

Phase 1 - **Coming Soon!**
PMS 306 C / 312 U
RGB 0/184/216
CMYK 78/0/13/0
HEX #00B8D8

Phase 2 - **Available Now!**
PMS 7656 C / 248 U
RGB 141/59/144
CMYK 48/90/0/4
HEX #8D3B90

As mentioned in the previous section [Type Treatments (Usage)] the **Sparklight Bright Blue** and **Sparklight Bright Purple** colors are used to classify the "phase" of the product roll out. **Phase 1** materials are typically used to announce that new speeds are coming, while **Phase 2** materials let our customers and prospects know that multi-gig services are now available.

Hybrid Fiber-Coaxial Markets - **LightMode**
PMS 000 C
RGB 255/255/255
CMYK 0/0/0/0
HEX #ffffff

Fiber-to-the-Home Markets - **DarkMode**
PMS 296 C
RGB 16/21/41
CMYK 89/81/52/69
HEX #101529

Unique background colors are also used, depending on the type of infrastructure in a given market. In hybrid fiber-coaxial (HFC) areas all page backgrounds should be **LightMode** (white.) In Fiber-to-the-Home (FTTH) markets page backgrounds should be **DarkMode** (dark blue/black.) The darker background provides a unique look for our expansion markets and imbues those materials with a sleek, futuristic feel. Examples below:

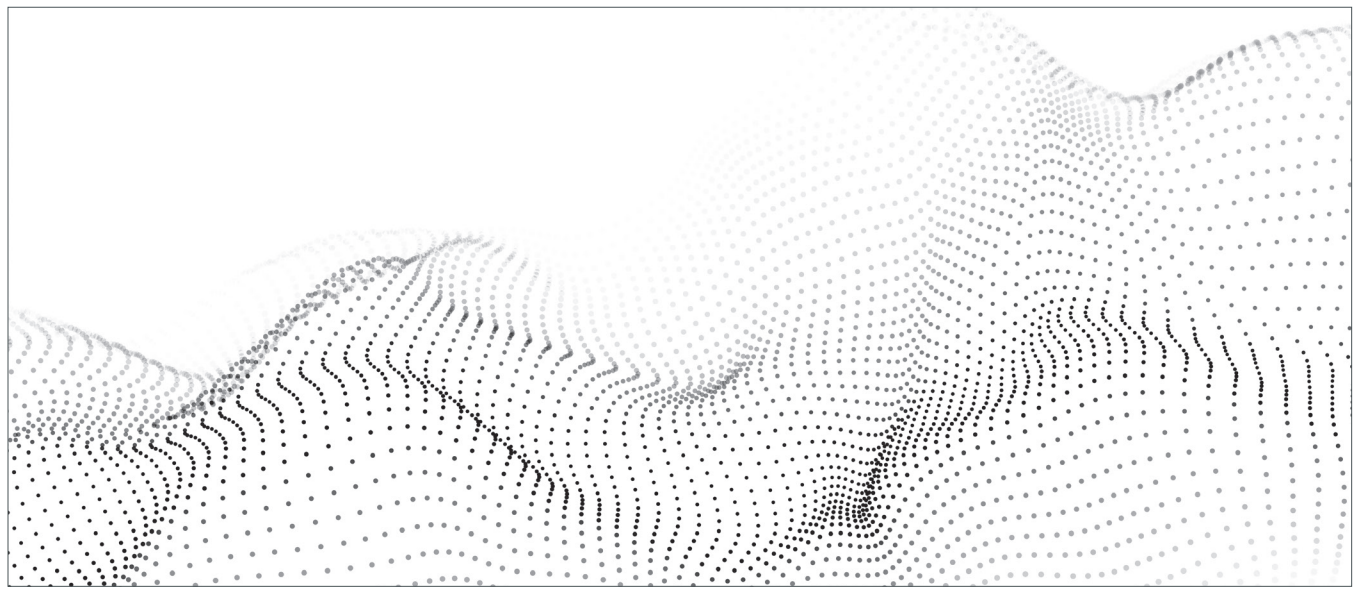

Here we see the same postcard laid out for both HFC and FTTH usage. The background color changes but virtually all other elements remain the static.

Texture

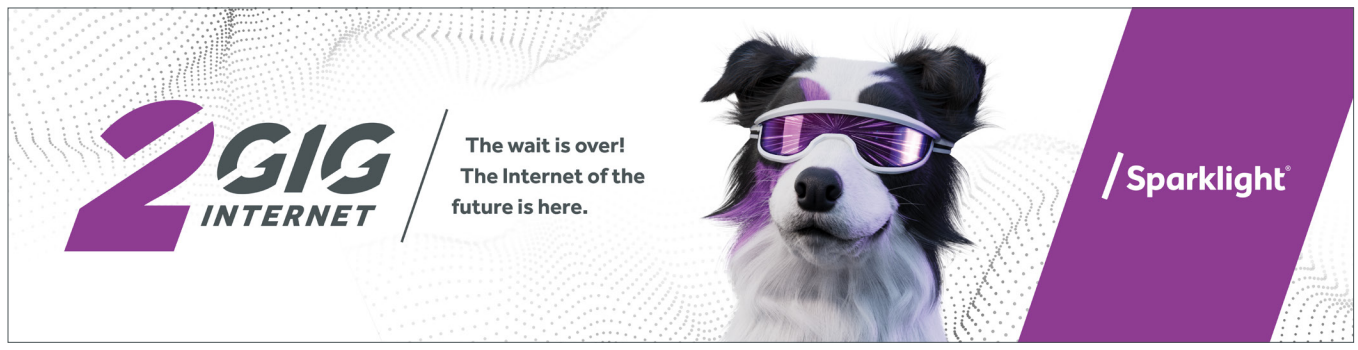

This dotted-wave texture is a unique feature of the multi-gig visual position and serves as a visual representation of the flow of high-speed data. By employing a sense of perspective and implied depth it provides energy and visual interest while grounding multi-gig compositions within the frame.

The texture is intended for background use, and should be a tertiary feature when building multi-gig layouts. Individual versions for both **LightMode** and **DarkMode** are available, and should generally be used at around 70% opacity. Gradient and directional feathering can be used with discretion in order to avoid overlapping important information.

Often used to "bookend" the content of a layout, the texture can be included multiple times within a composition as framing and to promote balance. The texture can be mirrored or rotated as needed to produce the required effect but consideration should be given to the relative sizing. When two textures are used in a single composition the individual dots should be roughly consistent and appear at the same relative size.

Photography

A modified version of Sparklight's icon serves as the face of our multi-gig products and services. Playfully adorned with space-aged goggles, this retrofitted character reinforces the high-tech, cutting-edge nature of multi-gig Internet speeds. This image is the primary image for the campaign and should be used wherever appropriate to further cement the visual position.

Additional imagery can be used with the multi-gig visual system. These photos should maintain a focus on technology and futurism where appropriate, often featuring darker values and colorful lighting.
